Release Notes

February 2023 Release

Table of Contents

Set Default Delivery Address when Creating First Order

OrderWise Ref: 61567
Menu Option: N/A
Status: Enhancement
Platform: Trade Portal & Layout Editor
Licensed Feature: No
Detail: The checkout process had been modified to set a customer's default delivery address automatically where a customer has no other delivery addresses set.

Add Variant Expiry Date to the Category Page

OrderWise Ref: 61229
Menu Option: Admin | Settings | Search & Browse | Results Display

- Show Variant Expiry Date

Status: New Development
Platform: Trade Portal & Layout Editor
Licensed Feature: No
Detail: Where a variant has an expiry date against it, the oldest expiry date displays on the Category page when the above setting is enabled.

Redact Customer Information for Guest Orders

OrderWise Ref: 61685
Menu Option: Admin | Orders | All Orders | [Edit]

- Redact

Status: Enhancement
Platform: Layout Editor
Licensed Feature: No
Detail: Orders placed by Guest Users can be redacted.

Facebook Shopping Module Added

OrderWise Ref: 61142
Menu Option: Admin | Modules | Facebook Shopping

Admin | Products | Category Mappings

Admin | Products | Features | [New/Edit]

- Facebook Shopping Attribute

Admin | Products | Features | [Edit] | Feature Values | [Edit]

- Facebook Shopping Value

Status: New Development
Platform: Trade Portal & Layout Editor
Licensed Feature: Yes (Facebook Shopping)
Detail: The 'Facebook Shopping' module allows a CSV file to be generated and downloaded that contains Facebook Shopping data. Some of the data can be controlled using the 'Custom Fields', 'Feed' and 'Mapping' settings. Both Google Shopping and Facebook Shopping categories can be set in the 'Category Mappings' page. Additionally, Facebook Shopping attributes and values can be set for specific product features.

Allow Customer Pricing by Geolocation

OrderWise Ref:	61188
Menu Option:	Admin | Configuration | Currencies | [Edit]

- Override Pricing Guest OrderWise Customer ID
- Override Pricing Registered OrderWise Customer ID

Admin | Settings | Integrations | IP2Location

- Database API Token
- Database Code
- Database Download Schedule

Status:	New Development
Platform:	Layout Editor
Licensed Feature:	No
Detail:	Geolocation is supported for currency selection. This feature can be set up using the IP2Location settings listed above. If a code and API token are provided correctly, the database will be downloaded as per the schedule. Currency pricing can also be overridden using the 'Override Pricing Guest OrderWise Customer ID' and 'Override Pricing Registered OrderWise Customer ID' settings. Additionally, a 'Currency' column has been added to the 'All Customers' page in the Admin panel so that it is clear which customer uses which currency.

Currency Selector Block Added to Layout Editor Mobile Header

OrderWise Ref:	61599
Menu Option:	Admin | Design | My Themes | [Edit] | [Edit Theme] Header Bar | [Mobile] | [Add Block]

- Currency Selector

Status:	Enhancement
Platform:	Layout Editor
Licensed Feature:	No
Detail:	'Currency Selector' block is available on the Mobile Header page.
